

Tedia Company, Inc., is committed to high quality, consistency, and clear communication in all of our products. We know that our customers count on the Tedia brand for the success of critical manufacturing and analytical applications, and we work diligently to ensure that no products are in the marketplace that could compromise this trust. Unfortunately, the possibility for counterfeit Tedia products can never be completely eliminated. We ask that all end users take some simple precautions to ensure that you are using certified Tedia brand high purity solvents.

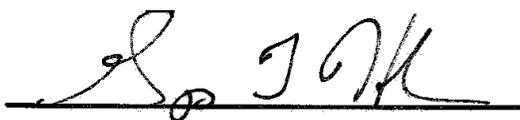

- **Know your supply channel.** Tedia's exclusive distributors around the world are clearly identified at www.tedia.com. Often, our distributors use their own networks of sub-distributors to guarantee efficient delivery. Make sure your vendor can demonstrate that a particular Tedia product was purchased or imported through the exclusive Tedia distributor for your country.
- **Verify the lot number.** Certificates of Analysis (COA) are available electronically for most Tedia lots at www.tedia.com. If you cannot find a COA for a particular lot at www.tedia.com, contact Tedia Customer Service (customerservice@tedia.com).
- **Look for discrepancies in packaging.** All Tedia products will carry the official Tedia logo:

If this logo is missing from your product, contact Tedia Customer Service. In addition, pictures of Tedia's most common packaging are available at www.tedia.com. If you suspect the authenticity of any package bearing a Tedia label, contact Tedia Customer Service.

Tedia is honored by the trust our customers place on the Tedia brand. We will continue to safeguard against counterfeit products that seek to make an easy profit from that trust. Together, we can greatly reduce the risk that counterfeit products will affect your critical applications.

Thank you for your business.

Gregory T. Huber
Quality Control Manager
