

Tedia Company, Inc was founded in 1975 by Moon Park, a Korean immigrant to the US. Mr. Park's vision was to advance the commercial-scale purification of organic solvents for analytical laboratories. Since its foundation, Tedia Company has been a leading manufacturer of high purity solvents for QC laboratories, analytical laboratories, and specialized manufacturing applications.

Tedia began as a private label (OEM) supplier to high purity solvent brands in the United States and now controls 70-80% of the North American market for OEM production of high purity solvents. In the 1990's, Tedia began exporting high purity solvents under the Tedia brand to international laboratory markets. Tedia products are now available throughout the United States and in over 30 countries around the world.

For nearly 40 years, Tedia has been pioneering new purification processes and production methods for high purity solvents. Tedia utilizes proprietary technology for solvent purification equipment that maximizes efficiency and consistency and for filling equipment that prevents cross-contamination while maximizing flexibility and throughput.

In the \$30 billion USD global laboratory supply market, Tedia remains uniquely focused on high purity solvents as a manufacturer and as a laboratory chemical brand. This focus helps our partners throughout the world meet highly specialized needs in chemical analysis and manufacturing applications.
